Océ Arizona 550 XT

The best selling UV Flatbeds, now 2x faster and 2x bigger Océ Arizona® Series printers are recognized as the best in the market for several reasons: exceptional print quality and value, plus the ability to help customers truly innovate their business. Now the best is available in a model that is twice as large and nearly twice as fast: the Océ Arizona 550 XT printer. This production-speed printer delivers the same award-winning print quality and is the fastest yet. It's oversized table can be used to produce extra large prints on rigid media or objects, and can even print non-stop for boards/objects 125 x 250 cm in size or less.

Benefits

- Produce nearly 110 boards (125 cm x 250 cm ea) in one 8-hour shift
- Produce near-photographic quality indoor or outdoor graphics; suitable even for close-viewed POP and backlit applications
- Print high margin specialty applications on oversized rigid media and objects
- Add the White Ink Option to expand your application capability
- Consume half the ink of most printers in this class per printed square meter; only 8 ml/m² average consumption including all maintenance
- Print on rigid and roll media with the same high quality results

Detailed Features

Grab attention with high quality, flatbed UV printer

No more trade-offs between image quality and speed. Océ VariaDot™ imaging technology produces ink droplets from 6 to 42 picolitres, resulting in superb image detail, smooth color transitions and vivid, uniform solid colors for closely-viewed signage and POP materials. Amazing results from a UV inkjet printer whatever the media or application.

Profit from new money makers with versatile UV flatbed printer. This extra large format flatbed printer lets you print on rigid panels up to 2.5 m x 3.05 m, and up to 50 mm thick; and flexible rolls up to 220 cm wide. You can even print on irregularly-shaped, reasonably flat objects, by simply placing them on the flatbed printer table.

Most printers can only do one or two things really well, but the Océ Arizona 550 XT flatbed printer does it all and more. Think parts templates for airplanes, CD covers, chairs, fast food menus, fabric, glass, plywood – even a full sized garage door – plus anything you need for indoor and outdoor display graphics printing too. Don't just replace your analogue printing capacity with digital, innovate your business and boost your margins producing specialty items not possible with any other digital printer. Choose Océ Arizona printers whenever image quality and application versatility are both hard requirements.

The Océ Arizona 550 XT printer reduces impact on resources

The Océ Arizona 550 XT printer complies with all relevant health and safety directives including CE, TUV, BG, CCC and others. It also complies with the European RoHS directives for heavy metal content.

Several options are available for the Océ Arizona 550 XT printer:

Roll Media Option

The Roll Media Option offers new possibilities for all Océ Arizona family printers. Supporting flexible media rolls from 90 to 220 cm wide, it gives you the ability to print on almost any flexible media including banner vinyl, self-adhesive vinyl, paper, textiles, backlit films, canvas and more.

White Ink Option

The White Ink Option can be purchased installed at the factory or later in your own facility. It gives you the flexibility to print any combination of color and white ink in 2 or 3 layers, on rigid or flexible media or objects. This offers the possibility to print backlit applications on transparent media, normally reserved for photographic, laser-based printers, or print on any non-white media or object imaginable. It also supports Day/Night application printing for applications that are alternatively back or front lit, such as menu boards. And of course, white can also be printed as a spot color with all the sharpness and detail of any other ink in the system.

Static Suppression Option

Customers with very dry environments may experience excessive static electricity on hard plastics such as acrylic and polycarbonate rigid sheets. The Static Suppression Upgrade Kit provides the ability to print on rigid media with excessive static without compromising image quality, or tightly controlling the printing environment.

The Océ Arizona 550 XT printer reduces impact on resources

The Océ Arizona 550 XT printer complies with all relevant health and safety directives including CE, TUV, BG, CCC and others.

The Océ Arizona 550 XT printer uses UV curable inks that do not contain volatile organic compounds and as a result the user needs minimal ventilation in the print room. This reduced need to extract or heat/cool large volumes of air from the printing environment results in a substantial cost and energy savings. It also consumes less than 3100 Watts of electricity at 240 VAC/50 Hz.

The Océ Arizona 550 XT printer does not require an external source of compressed air, making the operational and energy costs even lower.
